DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: Applicant doesn't provide a complete list of all the figures under the heading "Brief Description Of The Drawings".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by US 2421072 (Kramer).

Kramer teaches a system for securing a reversible cleat (spikes) as claimed including a securing mechanism (11), an anchor mechanism (1), and a plurality of reversible cleats (spikes as shown in 1,2,4,5, and 6). The cleat/spike is made out of rigid material (see col. 2, lines 30-36) and therefore has a first side and a second side that contact the securing mechanism when the cleat is reversed. Also, the cleat has an internal member (pin 18) that is rigid.

4. Claims 1,2,5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by both US 5926980 (Adam) and US 6006454 (Sitzler).

Art Unit: 3728

Both Adam and Sitzler have the structure as claimed and inherently can perform the function as claimed. The cleat of both can be removed and reversed and the securing mechanism (20 of Sitzler and 12 of Adam) re-attached. Especially since the cleats are resilient. This is not how you would normally apply the cleat but nonetheless they have the structure as claimed.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over either [Adam '980 or Sitzler '454] in view of US 6108944 (Savoie).

Adam and Sitzler teach a cleat system as claimed (see the rejection above) except for the securing mechanism having three extensions. Savoie teaches using a quick-release connector instead of threads, wherein the connector has three extensions (see figures 25-26). It would have obvious to replace the threads of the securing mechanisms of Adam and Sitzler with a quick-release connector having three extensions, as taught by Savoie, to facilitate quickly replacing the cleats.

Conclusion

7. Applicant is duly reminded that a complete response must satisfy the requirements of 37 C.F. R. 1.111, including:

-“The reply must present arguments pointing out the *specific* distinctions believed to render the claims, including any newly presented claims, patentable over any applied references.”

Art Unit: 3728

–“A general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references does not comply with the requirements of this section.”

-Moreover, “The prompt development of a clear issue requires that the replies of the applicant meet the objections to and rejections of the claims. Applicant should also specifically point out the support for any amendments made to the disclosure. See MPEP 2163.06” MPEP 714.02. The “disclosure” includes the claims, the specification and the drawings.
